

**The Council on Library and Information Resources
is pleased to announce the 2010
Postdoctoral Fellowship in Academic Libraries**

Radical changes in the information landscape are transforming traditional academic roles and the roles of libraries within the academy. This program prepares a new generation of librarians and scholars for work at the intersections of scholarship, teaching, and librarianship in the emerging research environment.

Participating libraries benefit from the expertise of accomplished scholars who can invigorate approaches to collection use and teaching, contribute field-specific knowledge and provide insight into the future of scholarship. Library fellows work on projects that exploit current information technology to forge, renovate, and strengthen connections between academic library collections and their users. The program offers scholars the chance to develop new research models, collaborate with information specialists, and explore new career opportunities.

What are the benefits to my library? During the one- or two-year fellowship, the fellow is a full-time member of your staff and works on a project or projects of your choice. Examples of work undertaken by past fellows include:

- consulting on the best, pedagogically sound ways to integrate technology and digital materials in the undergraduate classroom;
- collaborating with librarians, archivists, and information technologists on the development of writing and research guides for students;
- participating in the design and implementation of metadata standards for faculty using digital visual resources in their teaching and research;
- improving library sites and portals to reflect undergraduate user patterns;
- advising on and contributing to inventories of digital projects in area collections; and
- writing and consulting on grant proposals for digital projects.

Which institutions have participated in the program? Appalachian College Association, Bryn Mawr College, Claremont University Consortium, The College of Physicians of Philadelphia, Johns Hopkins University, Lehigh University, McMaster University, North Carolina State University, Occidental College, Pepperdine University, Princeton University, University of Alabama, University of California at Berkeley, UCLA, University of Illinois at Urbana-Champaign, University of Minnesota, University of Nebraska, University of North Carolina at Greensboro, University of Southern California, University of Virginia, and Yale University.

How do fellows benefit the library? Library directors cite the value of the fellows' disciplinary expertise and teaching experience. They point to the critical, growing role of librarians in the classroom. Directors mention the contributions fellows have made to the library's digital projects, working with faculty and students to ensure that such projects are planned for classroom use. Many directors view the fellowships as a means to attract more individuals to a profession that will see a high number of retirees in the coming decade.

What have the fellows gained from the experience? Fellows gain new perspectives on the materials that underlie their discipline and the potential for new use of library resources in the digital age. The experience also broadens their career options. Several fellows are pursuing MLIS degrees.

What is the cost of the program? Host institutions pay the fellow's salary, usually \$35,000 to \$45,000 per year. Two-year commitments are encouraged. Host institutions pay an additional \$5,000 for related activities: a two-week preparatory seminar; a monthly online symposium; a mid-winter meeting of fellows at UCLA; and a spring meeting in conjunction with a major conference.
