

New Directions: Computational Methods & Data

Lauren Di Monte

Associate University Librarian for Research & Learning

Yale UNIVERSITY LIBRARY

Agenda

1. Previous state
2. Change drivers
3. New Approaches
4. What's happening now

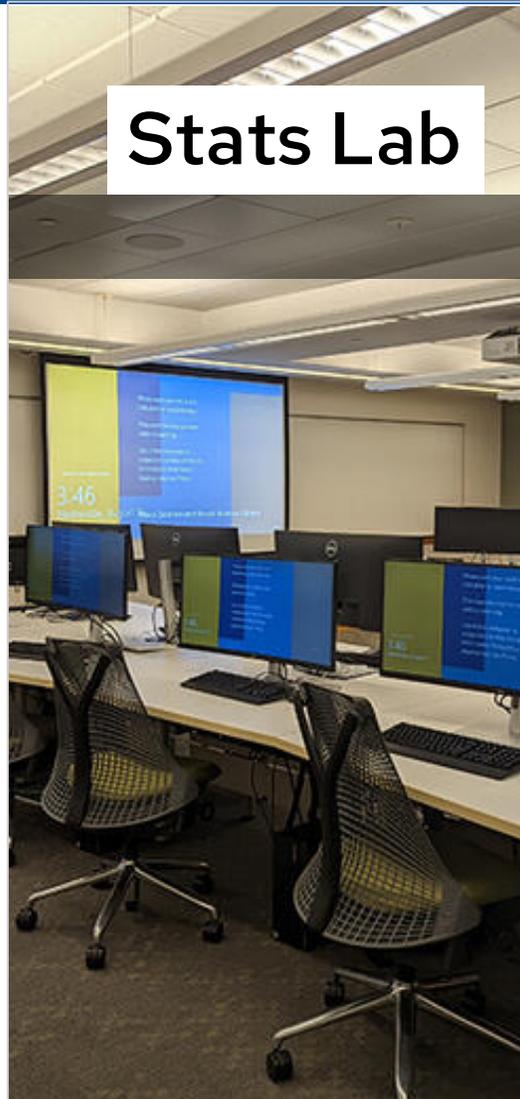

Earlier Approaches

DH Lab

Arts & Humanities

Stats Lab

Data

Science & Social Science

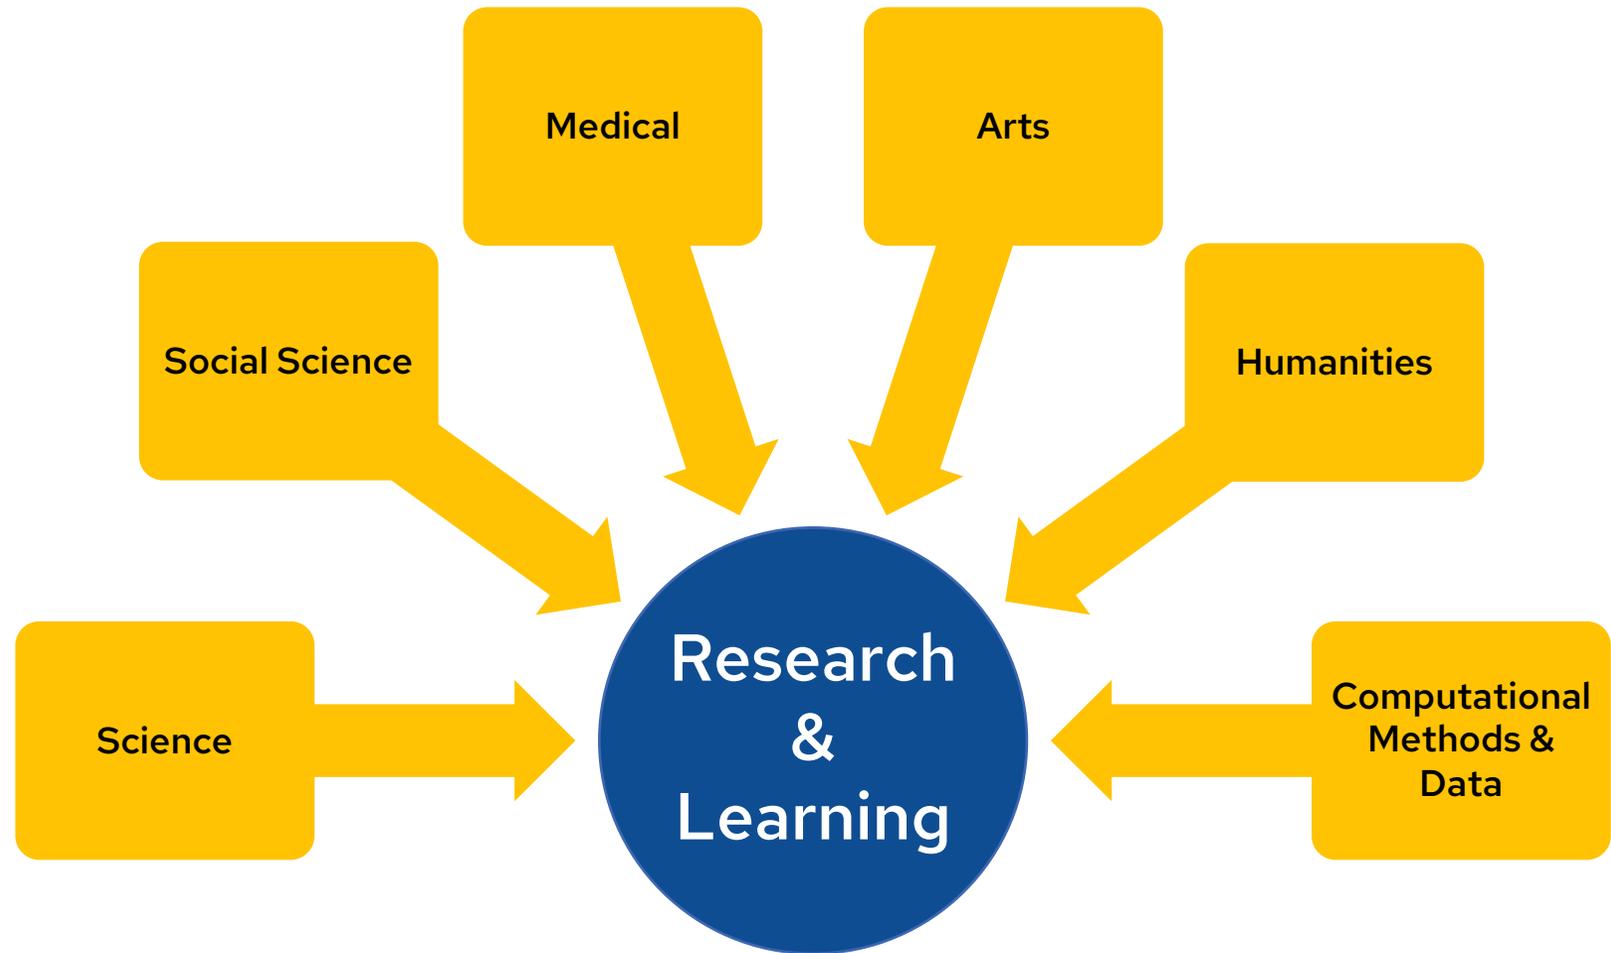

GIS

A New Portfolio

Research & Learning

Current Direction

Computational Methods & Data

DH Lab, Stats Lab, Data & GIS

Portfolio Strategies

Research & Learning

1

Library-wide approaches

Advance a coordinated, library-wide vision for research and learning services

2

Deeper engagements

Build relationships and partnerships to enable new possibilities

3

Strategically aligned

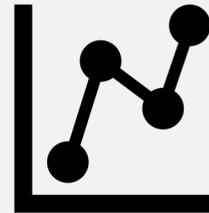

Align offerings with the University's strategic priorities

University Strategies

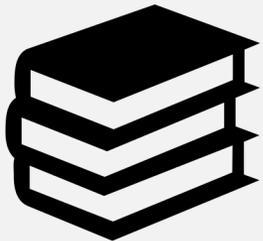

University Science Strategy

Data science, data management, research impact, new interdisciplinary programs

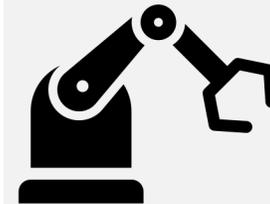

Data-Intensive Social Science Strategy

Establish a new Center dedicated to advancing data-intensive research in the social sciences

Humanities Doctoral Education Report

New dissertation forms, emphasis on interdisciplinarity, collaborative advising

Vision for Engineering & Applied Science

Cross-cutting research initiatives, interdisciplinary collaboration

Evolving our Approach

Assessment & User Engagement

1. **Go Deeper:** Get closer to the research; Lean into unique things library can offer
2. **Know Your Audience:** Become more user-driven; demonstrate that we're listening
3. **Targeted Solutions:** "everyone is welcome" vs. "built with you in mind."
4. **New Approaches:** Focus on how we should be doing things, not on how we've always done things
5. **Alignment:** meet university's existing and emerging strategies and priorities; "one library" approach

Deep Collaboration

Embedded Data Librarians

- Get closer to research and researchers
- Focus on research centers
 - Data-Informed Social Science Center
 - Geospatial Solutions Center
- Dotted line to Executive Director
- Center staff report to librarian
- Split compensation and FTE
- Workspace in Center

Sustainable Support

Distributed support model

- **Tiered Support**
 - Highest support tiers in Computational Methods & Data department
 - Enroll subject librarians and other staff at different tier levels; rescope roles (esp. in STEM and social science) and provide training
- **Add FTEs**
 - Hire more functional roles: data curation, data collections
 - Leverage FTE savings from research center partnerships

Filling Gaps

Reimagining the Stats Lab

- Understand audiences and align services
 - Focus on methodological support
 - Focus on reproducibility
 - Create a more stable staffing structure, and therefore a more stable service
 - Activate space
-
- Reengage DH communities
 - Engage Research Faculty of Digital Humanities
 - Create a space of “yes;” foster creativity and community
 - Digital dissertation fellowship
 - Collaborate with programs and departments to deliver certificate programs: DH, critical computing
 - Activate space

At the Table

- **Infrastructure**
 - Data repository, institutional repository
 - Persistent identifiers
 - Data discovery
- **Policy**
 - Data sharing, retention, preservation
 - Research data governance
 - Open practices
- **Engagement**
 - Education on federal mandates, data management
 - Coordinating support in a complex institutional environment

Thanks for your attention!
